## MONOGRAPH MARKETING PLAN Our publishing board, consisting of Editorial, Sales and Marketing experts, have chosen a publishing strategy and format for your book based on our experience selling academic books in markets around the world. By selecting this publishing strategy, your book has been given a particular marketing plan that aligns with where we expect to see sales. The information from your Author Questionnaire will help us refine and extend the reach of the marketing available. Monographs are mostly written to be read by faculty and post-graduates. The majority of copies are purchased by academic libraries and the sales

are driven by accurate profiling (subject coding, descriptive copy, tables of contents) and data distribution through data agencies and catalogues

to influencing peers and librarians.

- Inclusion in subject-specific promotional pieces which are taken to conferences/ events or inserted into delegate packs
- Books and/or single-title flyers sent to appropriate conferences and events. You can find a current list of conferences that Bloomsbury will be attending here: https:// www.bloomsbury.com/academic/forauthors/conferences
- Inclusion in relevant subject-specific email campaigns sent to our database of contacts
- Review copy mailing to limited number of appropriate media outlets
- Advance information sheet sent to sales representatives and agents
- We regularly feed out details of our books to all data providers and retail accounts
- · Full catalogue page on our website
- Digital preview facility on Amazon.com, Amazon.co.uk and Google Book Search
- Widget\* available for distribution by author and to other interested parties

## Review Copies

Because of the high level academic nature of monographs, we target our review copy mailings to a small selection of academic and library journals where review coverage will contribute to the impact of academic content.

## What is metadata for books?

Book metadata includes the basics about your book: title, author information, ISBN, publication, etc. It also includes the book description, subject codes and keywords that help booksellers categorize it for sale and place it among similar books and authors. It enables discoverability: how your audience can find your books through various search terms or comparable products.

We release our metadata through a number of feeds daily.

\* a widget is a digital preview facility which typically displays a book jacket, prelims, table of contents and 20 to 30 pages of text, along with bibliographic data and purchase options for viewers.
